# Agenda

- Progress report
  - App deployed! Yay!
  - API key is stable, please don't send too many requests
  - Decided to present project in class (presenter = Ryan)
- Demo app
- Discuss steps for presentation
- Should we make any changes for final code delivery?
- Thank TAs

# Progress Report

- **Milestone:** The app was deployed! The major changes are:
  - **Change of Design**: Mappings are done on the backend
  - Questions
  - Many UI improvements
  - Locations on map
  - Testing (not visible in app)
  - others
- **Difficulty:** Locu sometimes cuts us off if we make too many requests, so please don't make too many requests. If we do get cut off, we have some other API keys we can use (check the Google Doc)
- **Milestone:** Ryan will be presenting menyou in front of the class.

# Minutes

- Add "Meat" to the dietary restrictions page (DONE)
- Make word clickable in forbidden/like/dislike list (DONE)
- Change radius (DONE, but Locu's data is bad)
  - If you check out the **radius** branch of the repo, this has been implemented.. However, Locu gives bad data (ex. foreign language classrooms, hair salons) if the radius gets larger. So, I don't recommend using this in production.
- Draw circle (DONE)
- Add text box for forbidden (NOT DOING)
  - After thinking about it, adding a textbox for the forbidden keywords may not be a good idea. We already have a textbox for dislikes, and by adding another one for forbidden, users may be confused about the difference between the two. Furthermore, we do not want users to have to carefully think "Does this belong in forbidden or in dislikes". Therefore, to simplify the user's conceptual model and reduce their cognitive load, we won't be using a textbox for forbidden.
